

ENGINEERING SERVICES

Minopex believes in the power of evolution. Where minds are open, there will always be new frontiers – frontiers that will continually be pushed in the quest for excellence.

As the next step in the Minopex evolution, Engineering Services South Africa (ENSERSA) is proudly introduced. At the heart of the Minopex reputation for excellence, lies a team of highly qualified and expertly skilled engineers. The EnSerSa Maintenance solution model aims to provide clients with a team of experts for a range of engineering disciplines consisting of the following: planned and unplanned maintenance shutdowns; concept to commissioning projects, which include in-house fabrication and erection; breakdown supports and other services.

EnSerSa's engineering quality spreads from a corporate DNA, bred and perfected over the years. EnSerSa is a subsidiary of Minopex and DRA.

EnSerSa (Pty) Ltd, previously known as Minopex Engineering Support (MES) was initiated as a business unit within Minopex with the main purpose to support its long term in-house contracts since April 2010. A strategic decision was taken to transfer the business unit within Minopex to an individual registered business unit operating under the company name EnSerSa (Pty) Ltd as of January 2016.

We are forged from two companies with track records and intercontinental-wide reputations for delivering safety, quality and service excellence. Due to rapid growth, EnSerSa has been re-engineered to be even more adept at providing cutting edge engineering solutions to fit your business needs.

Our engineering solutions are tailored to each client's needs

We also have the capability to expand a full array of bespoke engineering services as and when you may require them. Services which are delivered by a highly qualified, motivated and skilled team of professionals.

Experts at your service
