

# MINOPEX LESOTHO / BOTSWANA / MOÇAMBIQUE

In order to ensure smooth operations in Lesotho, Botswana and Moçambique, Minopex established companies in these countries to overcome cross-border challenges.

This gives clients the full Minopex quality service offering, while being localised and therefore adapted to specific regulations in terms of labour and mining and other governing laws.

## Excellence in Outsourced Minerals Processing Operations

By handing over the processing function to Minopex in operating and maintaining your facility, Minopex is able to guarantee continuous production throughout the process, resulting in the reduction of operational downtime, and in turn, an increase in revenue. The Minopex teams have the flexibility to manage exceptional conditions and are able to remain focused on the specifics of the operation under their control, to ensure that all financial and quality goals of the contract are achieved.

Because safety, quality and service excellence are paramount elements within the Minopex Group business models, comprehensive controls and integrated computerised systems have been developed and set up to ensure effective and highly efficient techniques for the management and control of the minerals processing operations.

## Services offerings

- Process and Engineering activities
- Metallurgical Quality Management, Control and Analysis
- Scheduled and Preventative Maintenance
- Condition Monitoring and Analysis
- Purchasing, Stores Control and Asset Management
- Cost Control
- Contract Management and Administration
- Health and Safety Skills Development
- Environmental Management in conformity with the Employer's overall EMPR
- Specialist Sub-contractor Management
- Laboratory Operations and Maintenance
- Waste / Discard and Tailings Dump Management
- Commissioning Services
- Engineering Services

## Small projects

This specialised team was established to assist Minopex clients and EPCM/EPC/LSTK contractors with the commissioning phase of a mineral processing facility, worldwide. They are experienced in the commissioning phase, the different types of equipment found throughout plants and with the various processes involved. They include shift superintendents, senior process operators and control room operators who will bring a recently constructed plant to order as the client may still be training his personnel.

The dedicated Specialised Work and Training (SWAT) Team will assist with the efficient ramp up to nameplate capacity of any mineral processing plant.

Whether your processing facility is a greenfield or brownfield operation, the Minopex SWAT teams are unrivalled in turning things around in the quickest, most efficient and most cost effective way possible. With experience covering various commodities including coal, platinum, diamonds, iron ore and gold, the SWAT teams have every aspect of minerals processing covered, from designing the process, to building and then operating the plant.

Thanks to the expertise of our engineers, specialist maintenance and asset management teams, as well as our training and safety management teams, the SWAT team is geared to be operationally ready to fast track the implementation of any project. They're also ready to cut your costs, to reduce your business risk, and to improve your productivity.
